ARE YOU READY FOR THE BIG SWITCH OFF?

SCAN BELOW TO READ MORE

It is probably the biggest change in telecoms history and is being called the **'Big Switch Off'**, but what exactly is going to happen?

BT have announced that they are switching off their analogue and ISDN lines in 2025, forcing everyone to make changes to their existing telephone provision. The impact on the level of change and investment required will depend on your existing telecoms technology. It may seem a long time away but it is important to start planning now, to check contracts and notice periods, understand what your options are and ensure you have budget allocated for upgrades that may be required.

*BT Openreach own most of the UK's telecoms line network, so even if you are with a different provider, this will still apply to you.

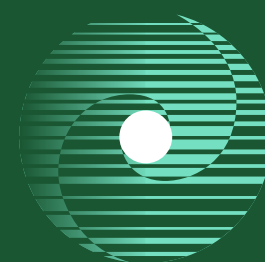

The Good news.....and the bad!

The good news is that there will be potential savings to be made, plus improved technology and features that you will benefit from. The bad news is that this forced change provides some telecoms companies with the perfect opportunity to exploit the situation, putting people at risk of being sold inappropriate, overpriced systems and becoming trapped in contracts.

But we've got your back!

It may seem a daunting prospect but we are here to help, by providing expert, honest advice, tailored to your individual circumstances. Our purpose, is to arm our clients with the information and knowledge of what action they need to take and when they need to take it, to avoid being over charged. Our end goal is to help clients transition smoothly, save money and future proof their telecoms hardware and systems.

Scan the QR Code on this sleeve to request a short free phone consultation and we'll start the process of getting you ready for the BIG SWITCH OFF today! (Scan here or email info@tariffaudit.com)

Yealink

Ultra Elegant Gigabit IP Phone SIP-T46S

Elegant executive-grade 16 line IP phone

The Yealink T46S is an elegant executive-grade 16 line IP desktop phone with a high resolution 4.3" backlit colour display and a wide range of advanced productivity-enhancing features. With Optima HD technology and the wideband Opus codec, enjoy crystal-clear communications every time. Not to mention, the T46S also comes with integrated Gigabit Ethernet technology. In turn, make the most out of efficient call handling as well.

Two Ethernet ports and Optima HD technology

Part of Yealink's 4 series, the SIP-T46S has two Gigabit Ethernet ports and uses Optima HD technology to provide clear and lifelike communications and supports a variety of connections, including headsets, electronic hook switches, and USB. Improved from the T46G, the T46S now includes Yealink's Optima HD Voice technology that provides wideband sound, and with full-duplex, echo cancellation, acoustic clarity technology and adaptive jitter buffer, conversations are as clear as if they were face to face. Not to mention, the T46S also uses a wideband Opus codec. This codec provides higher sound quality compared with other wideband codecs within a high network bandwidth.

Up to 16 VoIP accounts

This phone has been designed for professionals who require multiple lines, supporting up to 16 VoIP accounts. It is easy and comfortable to use and its stand can be adjusted into 2 angles. This deskphone supports PoE and so does not come with a power supply included.

Supports up to 6 expansion models

Not to mention, the T46S supports up to six expansion models. This allows for up to 240 additional buttons along with an LCD display screen and LED system. If this wasn't enough, the T46S comes with three pages of buttons. These buttons can be programmed with up to 27 paperless DSS keys. In other words, this SIP phone is excellent in terms of scalability as well.

In a Nutshell:

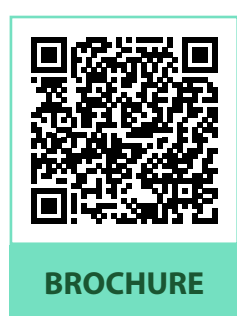

- HD Voice technology
- Supports up to 16 lines
- PoE, dual-port gigabit Ethernet
- 4.3" 480 x 272 pixel colour display
- RJ9 headset port
- Optional 5V DV power supply (sold separately)
- Stand with two adjustable angles
- Phonebook for 1000 entries
